# SAFETY DRIVING CENTER

command and  
control center

Safety driving centers are built to help old and new generations of drivers. The centre's primary missions are to equip motorcar drivers and motorcycle riders, especially the young who are noted as high risk road users, with the riding and driving skills using approved methods and techniques.

You can offer your clients many different options. For example some basic trainings for ordinary drivers with automatic scoring program and advanced level training program for professional drivers (government police, army, security, etc.). you can organise new car models presentations, promotions and social events, and for last safety driving program, team building programs and competition programs for business partners or employees.

For training safety driving center can offer you many different options:

- Over/under steering with front or rear wheel drive
- Causing of vehicle instability with random generator on the road
- Obstacle on the road with random generator
- Measuring reaction time of breaking
- Measuring breaking distance
- Automatic driver identification
- Automatic statistics and scoring file for each driver
- Driver's reaction recording and saving to individual file

In the command and control center every driver is automatically detected in each testing point and data is collected from data logger by wireless link. For each driver software application runs an evidence and for each training point there is automatic scoring program. User can choose between training option (training, scores, diplomas) or competition program (training, fun).
